Professional Summary

Full Stack .NET Developer with strong expertise in ASP.NET Core, C#, SQL Server, EF Core, Dapper, React, Redux, Tailwind, and SignalR. Experienced in building scalable APIs, optimizing database performance, and implementing secure authentication workflows. Proven ability to deliver high-quality features with measurable improvements in performance (>40%), API response time, database efficiency, and system reliability.

Technical Skills

Languages & Frameworks: C#, ASP.NET Core, Web API, EF Core, LINQ, JavaScript (ES6+), React.js, Redux, HTML, CSS, Tailwind CSS

Database: SQL Server, Stored Procedures, Spatial Data, Dapper, Query Optimization

Version Control & Tools: Git, GitHub, Postman, Swagger, Visual Studio, VS Code

Core Concepts: JWT Auth, Clean Architecture, CQRS, DI, Middleware, SignalR, Real-time Systems

Experience

Full Stack .NET Developer Intern — Bridgeon Solutions (09/2024 – 09/2025)

- Built 25+ ASP.NET Core Web APIs and improved API response performance by over 40% through caching, optimized queries, and refined payloads.
- Enhanced SQL query performance by 45% using indexing, refactoring joins, and Dapper-based micro-optimizations.
- Developed 15+ responsive UI screens using React, Redux, and Tailwind, reducing UI development time by 40%.
- Implemented secure JWT authentication and BCrypt hashing, reducing security risks by 50%.
- Built real-time chat & notification modules using SignalR supporting 200+ concurrent updates with <1s latency.
- Created admin dashboards with refined CRUD operations and analytics, improving internal workflows by 45%.
- Collaborated within a 5-member agile team, contributing to sprint planning, code reviews, and feature delivery.
- Ensured system stability with 40% fewer exceptions using structured logging and global error handling.

Projects

ECHO – Real-Time Location-Based Emergency Alert System (Completed)

Tech Stack: ASP.NET Core Web API, C#, SignalR, SQL Server Spatial, EF Core, Dapper, JWT, MediatR, React, Leaflet, Turf.js, Tailwind CSS

- Designed and delivered a fully production-ready emergency alert platform handling 500+ alerts daily.
- Achieved 40% faster geofencing computations using Turf.js + SQL Spatial calculations.
- Built 30+ backend endpoints with Clean Architecture (CQRS + MediatR) ensuring high maintainability.
- Integrated SignalR enabling <1s real-time updates for alerts, chats, and admin actions.
- Improved DB performance by 50% using Dapper + optimized stored procedures across 12+ entities.
- Created an admin panel with analytics, user verification, moderation, and alert auditing, boosting operational efficiency by 45%.
- Built map-based UI with Leaflet enabling real-time marker clustering and radius highlight.
- Delivered secure authentication, OTP flows, badges, rating system, and contribution analytics.

SAHAAI – Smart Assistance for Hiring & Immediate Help (In Development)

Tech Stack: ASP.NET Core, C#, EF Core, Dapper, SQL Server, JWT, SignalR, Flutter, Firebase

- Developed 20+ backend APIs for user onboarding, worker registration, booking workflow, and authentication.
- Implemented a worker auto-assignment engine improving assignment accuracy by 40% using proximity + skill-match logic.
- Engineered booking lifecycle (Requested → Accepted → In Progress → Completed) reducing booking processing delay by 45%.
- Improved read performance by 50% with hybrid EF Core + Dapper implementation.
- Built worker availability module supporting real-time status updates for 100+ workers.
- Integrated OTP, robust validation, and error handling reducing invalid requests by 45%.
- Coordinating with Flutter team for API testing; backend 70% completed with scalable modular structure.

Education

Bachelor of Commerce (B.Com), MG University (2019 – 2022)

Additional Information

Strong in OOP, debugging, REST API design, Agile/Scrum, architectural patterns, and performance tuning.
