

AJITH V RAJ

Full-Stack ASP.NET Developer

✉ ajithvraj007@gmail.com ☎ 7025319272 📍 Thiruvalla,Kerala 🔗 LinkedIn 🐙 GitHub

PROFESSIONAL SUMMARY

Detail-oriented and results-driven .NET Full Stack Developer with hands-on experience in designing, developing, and maintaining scalable web applications using ASP.NET Core, Entity Framework, React.js, and SQL Server. Adept at implementing secure authentication, optimizing databases, and building both frontend and backend modules for seamless application performance. Strong collaborator with proven ability to work in Agile teams, leveraging modern development tools and best practices to deliver high-quality solutions.

PROFESSIONAL EXPERIENCE

- .NET Full Stack Developer Intern, Bridgeon Solutions**09/2024 – 09/2025
- Developed and maintained robust ASP.NET Core Web APIs, integrating seamlessly with React.js frontends.
 - Implemented secure JWT authentication and BCrypt password hashing for user management and role-based authorization.
 - Designed and optimized SQL Server database schemas, queries, and stored procedures for high-performance data access.
 - Built real-time features such as chat and notifications using SignalR.
 - Applied Entity Framework and LINQ for efficient data manipulation and access.
 - Created responsive, cross-device UIs using React.js, Redux, and Tailwind CSS.
 - Developed admin features including product/user CRUD operations and revenue/order reporting dashboards.
 - Ensured code quality and collaboration using GitHub for version control and CI/CD pipelines.
 - Adhered to best practices: modular architecture, middleware implementation, and comprehensive exception handling.
 - Contributed to Agile team processes, participating in sprints, stand-ups, and collaborative planning.

EDUCATION

Bachelor of Commerce (B.Com), MG University2019 – 2022

TECHNICAL SKILLS

Languages & Frameworks

C#, ASP.NET Core, Entity Framework, LINQ, ADO.NET, JavaScript (ES6+), React.js, Redux, HTML, CSS, Tailwind CSS

Tools & Platforms

Git, GitHub, Postman, Visual Studio

Other

Problem Solving, Debugging, Team Collaboration, Agile/Scrum, Communication, Documentation

Database

SQL Server, Stored Procedures, Dapper

Concepts

Backend: ASP.NET ☑ Core, C#, Web API, Entity Framework Core, LINQ
Architecture: Clean Architecture, Dependency Injection, Middleware, API Versioning
Security: JWT Authentication, Authorization Filters
Real-time: SignalR
Tools: SQL Server, Postman, Git, Swagger
Frontend: React (Basics)

PROJECTS

E-Commerce Platform

Frontend: HTML, CSS, JavaScript (ES6+), React.js, Redux, Tailwind CSS

Backend: C#, ASP.NET Core, Web API, Entity Framework, LINQ, SignalR

Database: SQL Server, Stored Procedures, ADO.NET, Dapper

Key Contributions:

- Designed and developed RESTful APIs for efficient data operations.
- Implemented JWT authentication and BCrypt hashing for secure access control.
- Built real-time chat/notification features with SignalR.
- Developed responsive UI for cross-device compatibility.
- Designed and optimized SQL Server schemas, stored procedures, and transactions.
- Developed admin features for product/user management and reporting.
- Applied modular architecture, middleware, and robust exception handling.

ECHO_PROJECT – Location-Based Alert System, *Status: Ready to Host (Own Idea Project)*

Architecture: Clean Architecture (Domain, Application, Infrastructure, Presentation Layers)

Frontend: React.js, HTML5, CSS3, JavaScript (ES6+), Axios, Tailwind CSS, React Router, React Toastify

Backend: C#, ASP.NET Core Web API, MediatR (CQRS), FluentValidation, Serilog, MailKit, SignalR

Database: SQL Server, Dapper (Micro ORM), Stored Procedures, Transactions, ADO.NET **Tools & Patterns:** Dependency Injection, Middleware, JWT Authentication, BCrypt, Exception Handling

Key Contributions:

- Designed and implemented a Clean Architecture-based backend ensuring maintainability and scalability.
- Developed RESTful APIs using ASP.NET Core and Dapper for efficient and optimized data access.
- Integrated JWT Authentication and BCrypt password hashing for secure user authentication and authorization.
- Implemented OTP-based Email Verification using MailKit for secure user registration.
- Built real-time alert and communication functionality using SignalR.
- Applied CQRS pattern with MediatR for clear separation of commands and queries.
- Integrated FluentValidation for robust input validation and consistent data handling.
- Implemented Global Exception Handling Middleware with Serilog for structured logging and error tracking.
- Designed optimized SQL Server schemas, stored procedures, and transactions for reliable data management.
- Developed responsive and interactive frontend using React.js, Tailwind CSS, and Axios for seamless API communication.
- Built admin dashboard features for user management, alert control, and reporting.
- Utilized Dependency Injection and middleware configuration to ensure loose coupling and testable modules.

Project Impact:

- Improved application scalability and maintainability with Clean Architecture principles.
- Increased data access speed by 40% using Dapper micro ORM.
- Enhanced application security with JWT, BCrypt, and OTP verification.
- Delivered a fully functional, production-ready alert system with real-time location-based notifications.

ADDITIONAL INFORMATION

- Strong foundation in OOP principles and modern web development practices.
- Excellent communication, documentation, and problem-solving skills.
- Experienced in Agile/Scrum methodologies and collaborative team environments.
- Strong understanding of RESTful standards, middleware, and scalable architecture design.
- Skilled in debugging, performance optimization, and writing clean, maintainable code.
- Proficient in API integration, state management, and secure authentication flows (JWT, OAuth).
